

11 Ways to create a variable

There are 3 ways to create variables in JavaScript: **var**, **let** and **const**. Variables created with **var** are in scope of the function (or global if declared in the global scope); **let** variables are block scoped; and **const** variables are like **let** plus their values cannot be re-assigned.

```
var a = "some value"; // functional or global scoped
let b = "some value"; // block scoped
const c = "some value"; // block scoped + cannot get new value
```
