Ways to create a variable

There are 3 ways to create variables in JavaScript: var, let and const. Variables created with var are in scope of the function (or global if declared in the global scope); let variables are block scoped; and const variables are like let plus their values cannot be re-assigned.

```
var a = "some value";  // functional or global scoped
let b = "some value";  // block scoped
const c = "some value"; // block scoped + cannot get new value
```
